

### ***Fully tested, Used and Refurbished DELL PowerVault MD3000 Control Module***

The MD3000 is absolutely built for high-performance. Your options are either two-node clusters or direct attached to up to four PowerEdge servers. The PowerVault MD3000 is a direct attached modular disk storage of up to 15 3.5-inch SAS or SATA disk drives in a single 3U rack enclosure. The array is expandable by simply adding up to two additional enclosures. This solution would offer a total of 45 drives and up to 90TB of capacity. The entire storage array subsystem is managed from a single software application — known as the Modular Disk Storage Manager — that streamlines the management and maintenance of storage as it scales. What this means for your customers is that their storage can be quickly and easily added as needed without disruption to operations.

Alta Technologies carries an extensive inventory of used and refurbished **DELL PowerVault MD3000** networking hardware equipment.
